

PLAS ■ LABS' "Latest"

World Leaders in Acrylic Containment and Isolation Technology, Since 1967!

The new PLAS ■ LABS' poultry isolation unit is designed to protect both your fowl and personnel from cross contamination. They are ideal for acute and chronic studies.

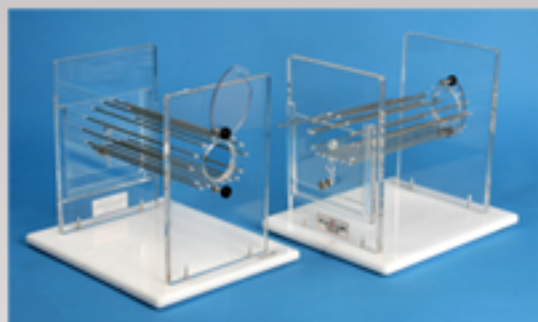

The isolation cubicles are match die molded of "hi-tech" thermoset plastic that is autoclavable or steam sterilizable. Cubicles are warm; absorb sound (quiet), and soft to the touch of various species.

Visit us in **Indianapolis** at **AALAS**, booth **1115**, to see the latest in poultry isolation.

Booth 1115

530-POR, Bowman Style Rodent Restraint

The new Bowman Style Rodent Restraint unit has been re-engineered and refined to accommodate larger sized animals up to 750 Grams.

The positions of the stainless steel rods around the rodent provide easy access for many types of research applications, especially obesity studies.

The **re-engineered** PLAS ■ LABS' Intensive Care Unit will feature a new touch screen control system, easy to read control system, and a lot more.
