

PLAS ■ LABS' "Latest"

World Leaders in Acrylic Containment and Isolation Technology, Since 1967!

Surgery Boards, Rodent Injection Cone, and Flat Bottom Restrainers

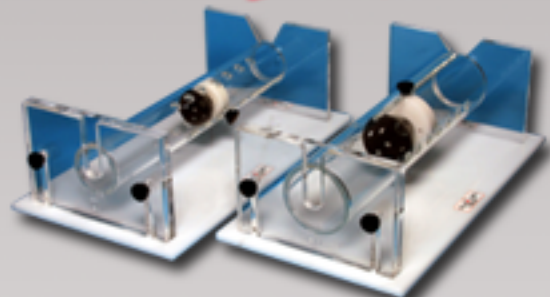

Small Animal Equipment by PLAS ■ LABS

PLAS ■ LABS is proud to introduce the latest in animal care and animal research products.

Originally established in 1967, PLAS ■ LABS has always offered high quality research equipment.

Research by its very nature, often means doing that which has not been done before. This may mean equipment that has not been previously produced. When this need arises, we gladly modify our existing products or, with your requirements in mind, develop new ideas.

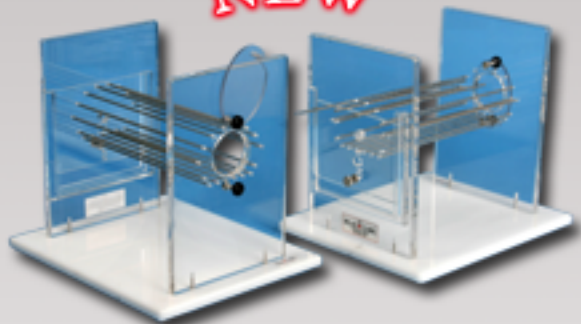

NEW

Ferret Restrainers

Now offered in four (4) sizes taking into consideration the animals age, weight, and sex.

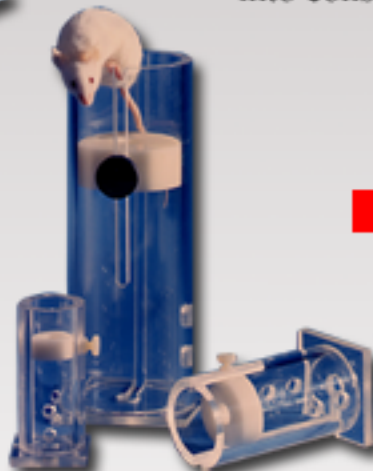

NEW

Bowman Style Rodent Restraint

Re-engineered and refined to accommodate larger sized animals up to 750 grams.

Broome Style Restrainers

This is perhaps the most effective style available for three basic reasons: Ease of use and access to the rodent, prevention of the animal's ability to turn, and safety for the animal handler.
