## REFRACTOMETER FOR ON LINE ANALYSIS OF CONCENTRATION

The microprocessor-based model UR24 digital refractometer is a self-contained multifunction analyzer which mounts directly on the process line. It continuously measures the concentration, displays the temperature-compensated concentration value, and transmits this value to both analogue and digital remote receivers.

The UR24 incorporates modern technologies such as:

- **Abrasion resistant sapphire prism**
- **Long life LED light source**
- **High resolution CCD digital optical sensor**

The instrument's membrane faceplate contains a back-lighted liquid crystal display and input keypad.

It is possible to personalize the instrument in the field, either from the keypad or remotely through the RS485 serial port.

Further more versions with interfaces for ANYBUS COMMUNICATOR (PROFIBUS DP or others on request) modules are available.

A set of specially designed adapters, customized for each application, allow easy installation of the unit on a process line or on the side wall of a tank:

- Food & Beverage (Tri-Clamp®, 3-A, DIN 11851, Varivent®, weld ends)
- Industrial (weld ends, threaded ends, flange ends).
